

Care & Cleaning - CARRFLEX® Upholstery fabrics

Carrflex® upholstery fabrics are resistant to most mild acids, alkalis, drinks and household stains. Clean with a damp soapy cloth and rinse well with clean water.

Remove surface grime by washing with water and mild detergents in compliance with the supplier's/manufacturer's recommendations, with the aid of a soft brush, sponge and/or power cleaning machine. Rinse well to remove all traces of detergent or soap residues.

Dry thoroughly with a dry cloth.

Do not heat the surface and **do not dry with hot air, to avoid color changes of the fabric.** Carefully read the instructions of the detergent manufacturer.

Remove stubborn dirt using concentrated cleaning products, always following the manufacturer's instructions and/or performing tests on small areas before proceeding.

NEVER abrade/scrape away the surface finish, simply rinse with clean water until removing all traces of detergent.

Do not use organic solvents or alkaline detergents, oils, strong oxidants, which may otherwise damage the coated fabrics.

Avoid chemical detergents, aggressive solvents, fuel, gasoline, kerosene, bleaching agents etc., and rigid bristle brushes.

Also avoid high-pressure water jets to avoid damage to the thin surface layer, frequently composed of materials such as Acrylics/PU having various additional protective functions.

Carefully read the instructions of the detergent manufacturer before start cleaning.

Dry thoroughly with a dry cloth. Do not heat the surface and **do not dry with hot air, to avoid color changes of the fabric.** Carefully read the instructions of the detergent manufacturer.

Do not use solvents, bleaches, abrasives, synthetic detergents, wax polishes or aerosol sprays (chlorine-releasing agents at levels of 1-10000 parts per million should pose no problems as long as the material does not endure long soaking at the higher concentrations). Disinfectants may be used in dilution as specified by their manufacturers.

These include Haz-Tabs and other disinfectants commonly used in hospital infection control programmes.

Carrflex® upholstery fabrics surfaces are NaDCC compatible.

Chlorine based agents, used for cleaning and disinfecting in hospitals, can be used in specified dilution only.

If the bleaching agent is harsh then it will tend to extract the chlorine from the PVC & make it brittle.

Carrflex® upholstery fabrics cannot be tumble dried.

Do not iron Carrflex® upholstery fabrics.

IMPORTANT FOR ALL CLEANING PRODUCTS:

Wipe off cleaning product residue with a clean, soft cloth and allow to air dry completely before use.

NB: Please consider other materials used in the cover construction as different conditions for cleaning will apply.
